Presentation

« Your gestures make my words meaningful ».

My Words is an ongoing collaborative project which explores the relationship between gesture and meaning in interactive writing.

In this online creation, an interface gives access to several words, each word corresponding to a short interactive scene. In each scene, it is not so much the animation but rather the interaction with the reader, the reader's gestures, that make the words meaningful. The reader can thus experiment with the meaning of the words, or at least the one given to the words by the authors.

This creation is also an invitation to participate. Through a dedicated tutorial and interface, everyone is able to contribute by adding new scenes. The world of *My Words* is an expanding world. *My Words* are everyone's words.
